Advanced Features, Creating Better Value

Stimuli™ Advanced Version 4.0

Stimuli™ is a refraction device that replaces the old technology, the automated projector. Stimuli™ eliminates the "memore effect" by bringing virtually unlimited charts to the patient in a random manner. All functions are at the practitioners' fingertips.

Since its introduction in 2000, the Stimuli™ Visual Acuity System has been a very reliable tool in the hands of physicians in clinics as well as private practice. The new 21.5" iMac slim line makes Stimuli™ Advanced an even more desirable and versatile diagnostic tool.

Stimuli™ Advanced Version 4.0 Includes:

> 21.5" Apple iMac Computer Monitor

> Stimuli™ Software Package

> Remote Hand Controller

> Pediatric Suite of Octotypes -
   Tumbling E's and Tumbling C's

> Cartoons Feature Package
> Contrast Sensitivity Test

HAAG-STREIT USA

Stimuli™ Advanced Version 4.0 Features:

> Progressive, single line, single optotype and equal size charts, with random refresh, columns, isolation, pointer and contour bars.
